- AI & Data Science

## Why custom products?

There is no one size that fits all when it comes to business. Every software platform needs to be customized to the processes, workflows, compliance requirements, and ecosystems of the business. Whether it is managing customers, integrating with channel partners, accounting, seamless check-in and smart rooms, or analytics, make your software just like how you need it to be. Just start from scratch or connect features from existing platforms!

## How InApp fills the gap

Our processes ensure that each piece of software we deliver are of the best quality. The delivery team is well supported by technical architects, data science experts, and UX analysts. Add multiple layers of quality compliance in the form of SEPG, SQA team, and the PM office, you can be fully confident that your custom requirements are met to the best of your satisfaction.
